SWP-SPH-LATERAL TRANSFER WITH FULL LENGTH SLIDER SHEETS

Description of Task: Surface to surface (e.g. bed/stretcher/table etc.) transfer using 3 full length slider sheets Position/Job: 2 or more Healthcare Workers (HCWs) Department/Unit: All patient care areas Potential Hazards Personal Protective Equipment Required Risk for Injury (check all that apply) Specify Type, Manufacturer, Model Biological (puncture/spill/splash/exposure) Head Protection: Caught In/Under/Between Wall, Equipment Eye Protection: Chemical/Hazardous Substance/Medication Hearing Protection: Contact with Hot/Cold Object/Substance Face Protection: Contact with Sharp Object (not biological) Hand Protection: Electrical Foot Protection: Proper Footwear Falling or moving equipment/material Respirator/Fit Test: Moving machinery / parts Body Protection: MSI-Awkward / sustained postures Hi Visibility Apparel: MSI-Forceful exertions Other: MSI-Repetitive motions Equipment and/or tools required to perform task

SWP-SPH-LATERAL TRANSFER WITH FULL LENGTH SLIDER SHEETS

This safe work procedure was created by The Provincial Workplace Safety and Health MSIP Subcommittee and will be reviewed any time the task, equipment or materials change and at a minimum of every three years from the last revision date.

Notes/Other Considerations:

- More than 2 HCW may be required if:
 - Patient is greater than 200 pounds (90 kg), obese or very tall (approximately one more HCW for each 100 lbs. of patient weight)
 - o Low or High Muscle Tone is present
 - o Behaviour interferes with care.
 - o Patient care equipment or devices are being used (e.g. Casts, I.V. poles)

Recent surgery or fracture. (e.g. Hip precautions) etc.

Steps to be taken to complete task safely	
1	Place the beds flat and position bed at the waist height of the shortest person. HCWs are positioned on opposite sides of the bed and two sliders are in place under the patient. Use hard board to bridge gap if necessary.
2	Insert extension straps (or substitute) through loops of top slider only at the level of the shoulder and hip. Larger and/or taller patients can also have an extension strap at the knee as needed.
3	Place the receiving bed/surface beside the original surface with a third slider on the receiving surface. The receiving surface can be slightly lower than the original surface. Ensure brakes are engaged on receiving surface and the bed
4	Ensure any equipment (pump/tube etc.) attached to patient is moved to receiving surface prior to transfer.

SWP-SPH-LATERAL TRANSFER WITH FULL LENGTH SLIDER SHEETS

5 Use wide base of support with one foot in front of the other. HCW one (left in photo) will place one hand on the patient's shoulder and the other hand on the patient's hip. HCW two (right in photo) can assist by grasping the extension straps near the shoulder and hip. Additional HCWs, if needed, can be positioned on either side of the patient at the level of the hip and knee. 6 Have the patient cross their arms across their chest. When both HCWs are in the correct position, they will move at the same time. Ensure proper weight shift for the HCW. HCW one pushes slider sheet towards HCW two, HCW two pulls slider sheet towards themselves. Slider sheets are always removed before the HCWs leave the bedside. 7 **Related Materials:**
