SWP-SPH-TWO ASSIST MECHANICAL SIT TO STAND TRANSFER

Notes/Other Considerations:

- Patient should be properly assessed for ability and potential contraindications in using this lift
- The patient must be able to:
 - Move from lie to sit independently or with minimal assist
 - Able to support themselves independently in sitting at the bedside
 - o Hold onto lift handle with at least one arm and partially weight bear with at least one leg
 - o Bariatric patients will hold on with two arms and partially weight bear two legs
 - o Maintain a balanced upright position during transfer
 - o Follow directions
- If behavior interferes with care, alternate procedures and/or equipment may be required
- Never leave the patient unattended attached to the lift.

<u>Note:</u> Prior to each use, ensure that the sit-stand lift is in proper working order and that the battery is sufficiently charged. Inspect the sling for signs of damage prior to use

Note: Sit-stand lifts are designed for short distance transfers only (e.g. bed to chair)

Stone to be taken to complete took cofely		
1	Steps to be taken to complete task safely With the patient sitting at the bedside or in the chair, the HCW adjusts bed so that patient sits with feet on the floor. Apply bed and/or wheelchair brakes.	
2	Ensure that there is adequate space to maneuver the patient/resident in the area.	
3	Place the lifting sling under the patient's arms and around the back of patient/resident. Fasten the waist belt and ensure it is snug securely around the trunk.	
4	Move the sit-stand lift in front of the patient. Ask patient to place feet on the foot plate. The patient's shins should rest against the shin pads. Legs of lift should be under the side of the bed or around the base of chair or commode. Apply brakes	
5	If adjustment is possible, adjust knee/shin pads so that the pad sits just below the kneecap. Attach any available calf straps and tighten as required.	

SWP-SPH-TWO ASSIST MECHANICAL SIT TO STAND TRANSFER

6	Attach the straps securely to the sit-stand lift as per lift type (loop vs. clip). Release brakes on the sit-stand lift or as indicated by manufacturer's instructions or training. HCW#1 stands in front of handles, facing the patient.	
7	Ask the patient to grasp the available handles of the sit-stand lift, lean back and push with their legs.	
8	While patient is leaning back, raise the lift until the patient clears the bed or chair. HCW #2 assists in guiding the patient and lift in the direction of the destination.	
9	Guide patient to receiving surface, opening the lift base as required.	
10	Apply bed and/or wheelchair brakes as appropriate. Lower the patient onto the chair or bed. Ensure the patient's legs touch the front edge of the seating surface and that the buttocks reach the back of the seat. Detach the sling and leave the patient in a safe and secure position. Remove the lift and take the sling out from behind the patient.
